

Do batteries provide current

Overview

Most batteries produce direct current (DC). A few types of batteries, such as those used in some hybrid and electric vehicles, can produce alternating current (AC). Batteries produce DC because the chemical reaction that generates electricity inside the battery only flows in one direction. This unidirectional flow of. A AA battery is a type of dry cell battery. The term “dry cell” is used to distinguish it from an earlier wet cell battery. A battery is typically made with a zinc can as the anode and a carbon rod as the cathode, with an electrolyte of potassium hydroxide. The AA size was.
