

How to keep the battery cool without power supply

Overview

Thermal insulated blackout curtains are great, but heat-blocking curtains are even better because they're specifically designed to reflect heat. You can make your own for just a few dollars. Even if the power doesn't. You could do this instead of making heat-blocking curtains. But if you did both, it would make an incredible difference. Visit SunSetter Awnings for a free idea kit and a \$200 savings certificate. Check around your doors and windows for air leaks, and use caulk and weather stripping as necessary. You don't want even a little bit of cool air to escape. Or if you don't want to wait that long, move to a home with some large trees around it. As someone who has lived in houses with and without shade, I can assure you this makes a big difference. These O2Cool 10" Fans are only \$25 and work surprisingly well. They take 8 D batteries, but will last up to a week on the low setting. What you could do is get some rechargeable D batteries.
