

Small Solar System Prices and China

Overview

China has recently become a dominant player in the solar photovoltaic (PV) industry, producing more than one-third of the global supply of solar cells in 2008. However, as of 2008, less than 1% of global installatio. China has rapidly positioned itself as a dominant player in the solar photovoltaics (PV). China has been the economic revelation of the first decade of the 21st century with an average GDP growth of 10% between 2000 and 2008 (EIA, 2009). This growth has had a strong effect o. When analyzing the economic viability of PV, two major challenges can be distinguished. First, there is the need for solar module prices to decrease in order for investments in P. Below we discuss the methodology for deriving a general solution to determine the cost of PV and the optimal FIT. The resulting closed-form solutions will be subsequently us. The data used in our calculations for China (as described in Table 1) relies on three types of sources for information: prior academic research into the economics of solar PV (e.g. Jin.
