

Solar Panel Phone

Overview

While it's true that solar chargers will most certainly get the job done and charge your phone when you need it, there are some drawbacks to these units too. Firstly, they are powered by the sun and thus will only work in full, strong sunlight. Second, they are far lower in power output than standard electrical outlets and so depending on your phone. You may be wondering whether it's a good idea to use a solar charger for your phone, or whether there may be possible damage caused by using these units. After all, mobile phones these days aren't cheap and their batteries are already not very long-lasting as it is, so the last thing you want is to reduce their capacity further. Again, the quality. Solar panel phone chargers work by utilizing small solar panels to harness the power of the sun to charge either your phone's battery directly or a separate battery bank attached to the panel. Most solar chargers can just charge more than just your phone — anything with a USB connection is usually fair game, although devices like laptops are too po. The reason that solar panel phone chargers are possible, and that they work so well, is that phone chargers have such minimal electrical needs. Most phone chargers use 2-6 watts of power while charging, and around 0.1 of a watt when left plugged in with no phone, and so do not use a significant amount of power overall. For example, a new iPhone cha. A solar panel cannot simply be plugged into your phone, no matter how small it is. The lack of voltage regulation will quickly damage your phone's battery, as it's not designed to handle such fluctuations in voltage. As mentioned earlier, you need 5v to charge your phone, and any more can damage your battery. That said, a 12v “cigarette” adaptor ca.
