

Solar power generation owes money to the grid

Overview

Current grid-related investment for renewables is insufficient. Innovative financing models, such as the Independent Transmission Project, can help cash-strapped utilities improve infrastructure. Self-consumption beats exports – Maximizing the solar electricity you use directly in your home typically provides better financial returns than exporting excess to the grid, especially with time-of-use rates and battery storage becoming more common in 2025. Federal tax credit uncertainty looms –. Solar power generation owes money to the grid a solar PV system beneficiary for each kWh of electricity you generate. One of the questions we get a lot is "what happens to extra electricity generated from solar panels?"

"The vast majority of the. "The amount of money that's going into the solar PV industry is growing," said GSC CEO Sonia Dunlop.
