

The photovoltaic panel is plugged in but the charging status is not displayed

Overview

The controller may not allow full charge current even with the charging light on. If necessary, replace the controller. Batteries are overcharging and/or have too much. The solar charger is unresponsive The solar charger is unresponsive (inactive) if the display is not illuminated, there is no charging activity, and it is not communicating with the VictronConnect app via Bluetooth or the VE. Check the system first for basic problems to save a lot of time. A good place to start is to check the output of the system at the. In this comprehensive guide, we'll walk you through multiple methods to verify your solar charging system is working properly, from simple visual checks to advanced monitoring techniques. Solar charging issues are more common than you might think. For example, higher electricity bill could just be due to a utility billing change. That's why monitoring tools like the Enphase App are helpful.
